

The image shows two vertical soil cores placed side-by-side on a bed of green grass and some dry plant matter. The soil is dark brown. The left core is labeled 'Earthgro and ALLELOcarb G' and shows a dense network of white roots extending from the center towards the outer edges of the core. The right core is labeled 'Earthgro alone' and shows a dense network of white roots primarily concentrated in the central portion of the core, with fewer roots extending towards the edges.

Earthgro and ALLELOcarb G

Root development around
and to the edges of the core.

Earthgro alone

Root development
mainly in the center of
the core.
